This project's goal was to make GB carts that were easy to print and need no hardware to close. with the screw hole removed no support is needed. The plates lock together with redesigned tabs. due to this, the plates are not compatible with original GB carts.

included are multiple options for the front plate. The three basic flavors are the fully blank, the OG sticker dimension insert, and a kitsch-bent style insert for larger after market labels. each style also has a PTC (power tab covered) version. this allows edge to edge designs by covering over the cut out for the power tab that locks carts in on the DMG.

The STEP files are also included for making your own variations without needing to replicate the entire cart.
